

#### 4.4.1 Project SAMPARK OUTCOMES TILL 31<sup>st</sup> Mar2016

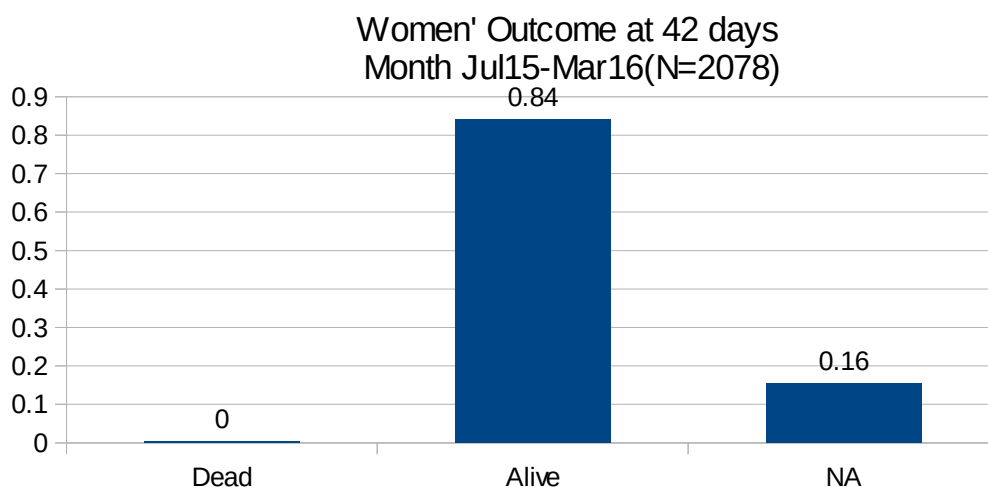

By the end of **31<sup>st</sup> March 2016** following are the key achievements under the project:

A total of **2,617** patients have been helped through the intervention, out of which **705** were directly helped and **1,912** were helped through the four operating call centers- Helplines.

Of the total of **2617** patients benefitted through the Sampark Intervention, **2,014** (78%) were discharged after referral care whereas a **193** (7.4%) cases were further referred to the higher healthcare facilities. There was a healthy number of patients, who came alive post the emergency maternal obstetric care, at **2,103** amounting to **(80.4%)**.

The combined number of deaths at the time of exit at **55** for all the four intervention areas whereas the outcome after 28/ **42** days of completion of the intervention, the combined death figure was **108**.

The composite women' outcome at end of 42 days of intervention cycle across the four intervention districts is illustrated as below:

The newborn outcome at the end of 28 days of intervention cycle is as follows:
